

NUTRIFLORE PDC

OPTIMIZATION OF FERMENTATION

A nutrient especially prepared to aid malolactic starter solution processes

↘ OENOLOGICAL APPLICATIONS

NUTRIFLORE PDC is a natural lactic bacteria activator based on deactivated yeasts selected for their high level of growth factors.

NUTRIFLORE PDC activates bacterial enzymatic systems by providing the medium with the specific vitamins, minerals and amino acids needed as nutrients. The latter's presence ensures an accelerated yeast starter solution process.

What's more, **NUTRIFLORE PDC** can also improve the growth and viability of lactic bacteria.

↘ INSTRUCTIONS FOR USE AND SAFETY PRECAUTIONS

Concentration: 25 g/100L (per 100 litres of starter solution).

Add the **NUTRIFLORE PDC** to the malolactic yeast starter solution at the same time as inoculating with lactic bacteria.

For best consistency, prepare as a suspension beforehand in a small quantity of water or wine.

↘ PROPERTIES

Deactivated yeast: proportion of organic nitrogen < 10% of the dry matter.

↘ PACKAGING AND STORAGE

Bags of 250g.

Store in a cool, dry place free of odours. Once the bag has been opened, the product must be used quickly and cannot be kept stored.
